Registration Continues for High Performance Energy Workshop

***City, county and state officials, school leaders, architects, energy professionals,
others encouraged to attend***

Frankfort, Ky. (March 1, 2016) – Public officials interested in learning how energy efficient, high-performance buildings can save money, inspire innovation and help communities effectively meet the demands of a changing economy are encouraged to attend a one-day High Performance Public Buildings Workshop, March 15 at the Kentucky Community and Technical College in Versailles.

The workshop is sponsored by the Kentucky Energy and Environment Cabinet, Department for Energy Development and Independence (DEDI) and the Kentucky National Energy Education Development (NEED) project in cooperation with the Society of the American Institute of Architects. Registration is required and is currently available through the website at <http://energy.ky.gov/Pages/default.aspx>.

“Whether a public building has a comprehensive energy plan or is just getting started, this workshop offers practical strategies and sound energy management practices,” says Lee Colten DEDI assistant director. “The workshop agenda builds on the same successful strategies implemented in the design, construction and operation of Kentucky’s schools. Energy savings have translated into dollars saved, and reinvested in the classroom. We want to share this message with city, county, state and federal officials, and anyone responsible for the operation of public facilities.”

Attendees may earn Effective Instructional Leader Approval (EILA) continuing education units for attending the one-day workshop.

For additional information about the workshop or the Kentucky NEEDED project, contact Karen Reagor of NEED by calling 859-802-2024 or email to kreagor@need.org.
